

TRAK RYDER

Pedders Heavy Duty Coil Springs are built to ISO 9001 standards with a tolerance of only +/-2mm at loaded height and have unrivalled levels of comfort, handling and load carrying ability. Coil Springs are the foundations of the modern suspension system with most car manufacturers preferring Coil Springs due to their advantages of weight, tunability, space and ease of manufacture. Pedders research, design and manufacture their own range of Coil Springs from their own World-Class Manufacturing Plant in Victoria, Australia to QS9001 standards. Coil Spring design and manufacturing is a craft which requires strict adherence to a demanding series of procedures, all of which are critical to the performance of the final product.

TrakRyder Coil Springs

- ↑ Heavy Duty units provide precise rate to carry 4WD's & loads.
